

Ollama, for real

the real call

```
ollama.generate(  
    model="qwen2.5:0.5b",  
    prompt="Complete this sentence in five words or fewer: The cat sat on  
the",  
    options={"temperature": 0},  
)
```

-> a real HTTP POST to <http://localhost:11434/api/generate>

Same shape as every serving API: a prompt in, a completion out, over the network (here, localhost).
