

DeepEval, for real

CODA: the real library

```
deepeval.test_case.LLMTestCase      real pydantic test case object
deepeval.metrics.ExactMatchMetric    real, built-in, non-LLM metric
deepeval.assert_test                 real assertion helper
```

No custom scoring code, no mock -- the library's own objects run.

deepeval 4.1.3, telemetry opted out before import.
