

DeepEval, for real

deepeval's own assert_test, live

```
assert_test(case c1, [ExactMatchMetric()]) -> no exception (score 1.0)
assert_test(case c4, [ExactMatchMetric()]) -> raised AssertionError

caught: Metrics: Exact Match (score: 0.0, threshold: 1.0, strict: False,
error: None, reason: The actual and expected outputs are different.) failed.
```

The exception text above is deepeval's own, not ours.
