

Chains can't loop

system

You are the barista at Beanline Coffee. Maya wants a latte; find a milk that's actually in stock.

human

Maya wants an oat-milk latte.

lap 1: the hand-rolled loop

```
chosen_milk = None
while chosen_milk is None:
    ai = model.invoke(context)
    milk = ai.tool_calls[0][
        "args"]["milk"]
    if stock.check(milk) > 0:
        chosen_milk = milk
    else:
        context.append(...)
        # lap again
```

Lap 1's context, exactly what the model saw. The loop lives only in python -- invisible, unrestartable, undrawable.
