

From prose to objects

system

Extract the order. The output should be formatted as a JSON instance that conforms to the JSON schema below. As an example, for the schema {"properties": {"foo": {"title": "Foo", "description": "a list of strings", "type": "array", "items": {"type": "string"}}}, "required": ["foo"]} the object {"foo": ["bar", "baz"]} is a well-formatted instance of the schema. The object {"properties": {"foo": ["bar", "baz"]}} is not well-formatted. Here is the output schema: ``` {"\$defs": {"OrderItem": {"properties": {"drink": {"description": "one of the menu drinks", "title": "Drink", "type": "string"}, "size": {"default": "medium", "description": "small, medium or large", "title": "Size", "type": "string"}, "extras": {"description": "extras, e.g. oat milk", "items": {"type": "string"}, "title": "Extras", "type": "array"}}, "required": ["drink"], "title": "OrderItem", "type": "object"}}, "properties": {"items": {"description": "the drinks ordered", "items": {"\$ref": "#/\$defs/OrderItem"}, "title": "Items", "type": "array"}, "food": {"description": "food items, e.g. croissant", "items": {"type": "string"}, "title": "Food", "type": "array"}, "to_go": {"default": false, "description": "takeaway or not", "title": "To Go", "type": "boolean"}}, "required": ["items"]} ````

human

large oat milk latte and a croissant, to go please

parser.get_format_instructions() rides INSIDE the real prompt: the schema is told to the model.
