

Prompts are functions

three holes: {menu}, {name}, {input}

```
ChatPromptTemplate.from_messages([
    ("system",
     "You are the barista at
     Beanline Coffee. Serving {name}.
     Menu: {menu}"),
    ("human", "{input}"),
])
```

The barista script with holes. Nothing rendered yet -- this is code, not a prompt.
