

State and reducers

```
ai  
one LARGE latte
```

add_messages: same id replaces

```
before: id='order-1'  
       content='one small latte'
```

```
after:  id='order-1'  
       content='one LARGE latte'
```

```
same id -> add_messages REPLACES  
len before 1, len after 1
```

The id matched, so add_messages replaced the message in place -- length unchanged, content changed.
