

Gluing model calls by hand

	model prose	regex r"\$?(\d+\.\d{2})"	expected
"A small latte is \$4.50."	extracted 4.50	want 4.50	PASS
"For a large it's \$5.50, ..."	extracted 5.50	want 4.50	FAIL

Same question, new phrasing: the regex grabs the large price for a small latte. Really wrong.
