

Gluing model calls by hand

the tally after three requirements

```
glue #1  prompting      an f-string
glue #2  parsing        a regex (wrong on phrasing 2)
glue #3  memory         a list (lost the system msg)
glue #4  tools          not even attempted
```

Every app rebuilds this same plumbing.
The plumbing, standardized, is LangChain.

None of these bugs were staged: both live in the recorded calls above.
